

Allstar EcoPoint 2023 Certificate of Sustainability

Presented to

For Offsetting

KG CO₂

Greenhouse gases are a leading cause of climate change. Your continued membership in the Allstar EcoPoint programme will have a measurable impact for years to come.

Your participation this year has supported the following carbon project types: forest preservation, wind energy, landfill gas recovery, energy efficiency, and transportation efficiency carbon projects. We at Allstar thank you.

CO₂ compensation cannot in itself make driving more sustainable. The goal of our program is to support your wider CO₂ compensation initiatives by offsetting an amount of the CO₂ emissions generated through the fuel purchased through your fuel card. The amount of CO₂ that the program certifies as offset is an estimate calculated on industry recognized criteria and validated by an annual external audit.
